

**Part Number:** LTCRJ11-6P4C-UC3

Cat.3 RJ11 UTP Modular Plug, 6P4C

## Product Description

The RJ-11 is a connector used mostly to link telephone networks. It is small in size and has four contacts to support 6P4C. It is the most globally available connector for the connection of conventional telephone sets, where usually only the two central wires are usually used for a single line or telephone pair. And the four wires are used only for special telephony devices that use double-line or the two telephone pairs. Once crimped to the cable, it is almost impossible to disassemble the RJ-11 without causing it to become unusable.

## Features

- Gold plated phosphor bronze contacts
- Polycarbonate body construction
- IDC Contact Termination

## Technical Specifications

Type	Cat3 6P4C RJ11
Color	Transparent
Housing	Polycarbonate
Contact	Blade Copper Alloy 3 Prong
Application	Telephone Cable Patch Cord Modular Plug
Shield or not	UTP
Insulation Resistance	10 GΩ
Rated Voltage	30 V
Durability	200 Mating Cycles
Weight	62g
